Electrical Power & Energy Systems

Index to Volume 7: 1985

Author

Alchaly, A A and see Allam, M F 253
Allam, M F and Alchaly, A A Exact quadratic loan flow algorithm using network reduction and P–V data 253
Alsac, O, Alvarado, F L and see Stott, B 154
Alvarado, F L, Alsac, O and see Stott, B 154
Ahsan, Q and see Schenk, K F 101
Baburam, A, Balasubramanian, R and Tripathy, S C Control of dynamic overvoltages due to load rejection by static shunt compensation 29
Bajorek, J Admittance and impedance matrices of multiconductor power cables. Application of Poynting's theorem 120
Bajorek, J Transient characteristics of power cables: a new approach based on Poynting's theorem 48
Balasubramanian, R, Jenkins, L, Parthasarathy, K and see Raghavandra Rao, K 7
Balasubramanian, R, Tripathy, S C and see Baburam, A 29
Bhatele, R P, Sharma, J D and see Thapar, O D 247
Brewer, B J and see El-Sharkawi, M A 165
Brucoli, M, Torelli, F and Napoli, R Quadratic probabilistic load flow with linearly modelled dispatch 138
Brucoli, M, Maione, B and Torelli, F Synthesis of excitation controllers for synchronous generators setting specified stability margins in the under-excited operating region 61
Bruliński, P and see Zieliński, J S 13
Carpentier, J 'To be or not to be modern' that is the question for automatic generation control (point of view of a utility engineer) 81
Degens, A J and Langedijk, J J M Integral approach to the protection of power transformers by means of a microprocessor 37
di Caprio, U Practical and structural coherency in multimachine power systems 147
Dillon, T S Application of distributed and dependable computer systems in power systems 67
Doraiswami, R and Sharaf, A M Digital controller design for enhancing steady-state stability of interconnected power systems 210
Elkamchouchi, H and Zaky, A A Transient response of a ferroresonant circuit 55
El-Sharkawi, M A and Brewer, B J Excitation control design of local machines in a large-scale power system by using dynamic equivalencing technique 165
Glavitsch, H Switching as a means of control in the power system 92
Grantham, C Electrical safety in hazardous environments 194
Irving, M R and Sterling, M J H Economic dispatch of active power by quadratic programming using a sparse linear complementary algorithm 2
Jenkins, L, Parthasarathy, K, Balasubramanian, E and see Raghavendra Rao, K 7
Koike, T, Yamashiro, S and see Nara, K 109
Lamba, S S and Ram Nath Coherency identification by the method of weak coupling 233
Langedijk, J J M and see Degens, A J 37
Machowski, J Dynamic equivalents for transient stability studies of electrical power systems 215
Maione, B, Torelli, F and see Brucoli, M 61
Morrison, I F and see Yang, Q 243
Mromlinski, L R Transportation problem as a model for optimal schedule of maintenance outages in power systems 161
Napoli, R, Torelli, F and see Brucoli M 138
Nara, K, Yamashiro, S and Koike, T Evaluation of loads in restoration state by the cost of interruption of electrical service 109
Papadopoulos, D P and Paraskevopoulos, P N Application of eigenvalue assignment techniques for damping power frequency oscillations 188
Paraskevopoulos, P N and see Papadopoulos, D P 188
Parthasarathy, K, Jenkins, L, Balasubramanian, R and see Raghavendra Rao, K 7
Price, D H R and Sharp, J A Investigation of the impact of changes in demand forecasting method on the financial performance of an electricity supply undertaking 131
Rabensteiner, G Long term expansion planning for hydrothermal electric power systems 225
Raghavendra Rao, K, Jenkins, L, Parthasarathy, K and Balasubramanian, R Multi-time scale analysis applied to long time simulation of power systems 7
Ram Nath and see Lamba, S S 233
Schenk, K F and Ahsan, Q Impact of load management and joint ownership of generation of two interconnected systems utilizing joint cumulants and the bivariate Gram–Charlier expansion 101
Sekine, Y Hierarchical power system control 75
Sharaf, A M and see Doraiswami, R 210
Sharma, J D, Bhatele, R P and see Thapar, O D 247
Sharp, J A and see Price, D H R 131

Sterling, M J H and see Irving, M R 2
Stott, B, Alsac, O and Alvarado, F L Analytical and computational improvements in performance-index ranking algorithms for networks 154
Thapar, O D, Bhatele, R P and Sharma, J D Optimal reactive power control via loss minimization and voltage control 247
Torelli, F, Maione, B and see Brucoli, M 61
Torelli, F, Napoli, R and see Brucoli, M 138
Tripathy, S C, Balasubramanian, R and see Baburam, A 29
Van Cutsem, Th Power system observability and related functions – derivation of appropriate strategies and algorithms 175
Verbruggen, A Decision model of electricity generation planning with an application for Belgium 201
Yamashiro, S, Koike, T and see Nara, K 109
Yamayee, Z A Long-range generation planning: use of optimization- and simulation-based computer programs 21
Yang, Q and Morrison, I F Fast digital distance algorithm using FIR filtering 243
Zahavi, J Probabilistic simulation incorporating single and multiple hydroelectric units with stochastic energy availabilities 229
Zaky, A A and see Elkamchouchi, M 55
Zieliński, J S and Bruliński, P Transient analysis in a three-phase power line with an application of the method of characteristics 13

Title

Admittance and impedance matrices of multiconductor power cables. Application of Poynting's theorem **Bajorek, J** 120
Analytical and computational improvements in performance-index ranking algorithms for networks **Stott, B, Alsac, O and Alvarado, F L** 154
Application of distributed and dependable computer systems in power systems **Dillon, T S** 67
Application of eigenvalue assignment techniques for damping power frequency oscillations **Papadopoulos, D P and Paraskevopoulos, P N** 188
Coherency identification by the method of weak coupling **Lamba, S S and Ram Nath** 233
Control of dynamic overvoltages due to load rejection by static shunt compensation **Baburam, A, Balasubramanian, R and Tripathy, S C** 29
Decision model of electricity generation planning with an application for Belgium **Verbruggen, A** 201
Digital controller design for enhancing steady-state stability of interconnected power systems **Doraiswami, R and Sharaf, A M** 210
Dynamic equivalents for transient stability studies of electrical power systems **Machowski, J** 215
Economic dispatch of active power by quadratic programming using a sparse linear complementary algorithm **Irving, M R and Sterling, M J H** 2
Electrical safety in hazardous environments **Grantham, C** 194
Evaluation of loads in restoration state by the cost of interruption of electrical service **Nara, K, Yamashiro, S and Koike, T** 109
Exact quadratic loan flow algorithm using network reduction and P–V data **Allam, M F and Alchaly, A A** 253
Excitation control design of local machines in a large-scale power system by using dynamic equivalencing technique **El-Sharkawi, M A and Brewer, B J** 165
Fast digital distance algorithm using FIR filtering **Yang, Q and Morrison, I F** 243
Hierarchical power system control **Sekine, Y** 75
Impact of load management and joint ownership of generation of two interconnected systems utilizing joint cumulants and the bivariate Gram–Charlier expansion **Schenk, K F and Ahsan, Q** 101
Integral approach to the protection of power transformers by means of a microprocessor **Degens, A J and Langedijk, J J M** 37
Investigation of the impact of changes in demand forecasting method on the financial performance of an electricity supply undertaking **Price, D H K and Sharp, J A** 131
Long-range generation planning: use of optimization- and simulation-based computer programs **Yamayee, Z A** 21
Long term expansion planning for hydrothermal electric power systems **Rabensteiner, G** 225
Multi-time scale analysis applied to long time simulation of power systems **Raghavendra Rao, K, Jenkins, L, Parthasarathy, K and Balasubramanian, R** 7
Optimal reactive power control via loss minimization and voltage control **Bhatele, R P, Sharma, J D and Thapar, O D** 247
Power system observability and related functions – derivation of appropriate strategies and algorithms **Van Cutsem, Th** 175
Practical and structural coherency in multimachine power systems **di Caprio, U** 147
Probabilistic simulation incorporating single and multiple hydroelectric units with stochastic energy availabilities **Zahavi, J** 229
Quadratic probabilistic load flow with linearly modelled dispatch **Brucoli, M, Torelli, F and Napoli, R** 138
Switching as a means of control in the power system **Glavitsch, H** 92
Synthesis of excitation controllers for synchronous generators setting specified stability margins in the under-excited operating region **Brucoli, M, Maione, B and Torelli, F** 61
'To be or not to be modern' that is the question for automatic generation control (point of view of a utility engineer **Carpentier, J** 81
Transient analysis in a three-phase power line with an application of the method of characteristics **Zieliński, J S and Bruliński, P** 13
Transient characteristics of power cables: a new approach based on Poynting's theorem **Bajorek, J** 48
Transient response of a ferroresonant circuit **Elkamchouchi, H and Zaky, A A** 55
Transportation problem as a model for optimal schedule of maintenance outages in power systems **Mromlinski, L R** 161
